

Now everybody was able to follow realtime status of the vending machine, even temperature of the softdrink bottles was no secret any more!

And..... should we mention that leader of the thirsty team, the research engineer at the university, was of Hungarian origin?

This Cola machine from the 80s can be considered the ancestor of today's smart tools, this is where the story began, paving the way for modern solutions, which make our life so easy (and difficult at the same time).

Dear Readers, our next article will cover the application of IoT devices in water industry, its set up, advantages and disadvantages. Until, we recommend you to check out our short presentation:
